THE LEADERSHIP FOUNDATION
INTERNATIONALLY
DEVELOPING LEADERSHIP, GOVERNANCE & MANAGEMENT, IN HIGHER EDUCATION

LEADING INTERNATIONALLY
Internationalisation of higher education is of central importance to UK higher education today, as the impact and implications of globalisation spreads into all aspects of institutions’ core businesses of teaching, learning, research and knowledge exchange.

Many institutions are in the process of developing or extending their international strategies to reflect this changing context in ways that seek to integrate the previously separate territories of education, research and links to business and the community, leveraging international opportunities wherever possible.

The Leadership Foundation, through its research and development activities and its range of programmes, aims to assist institutions to realise their internationalisation agendas, both through its work in the UK and its work with overseas higher education institutions and systems.

Our approach
The Leadership Foundation approaches internationalisation from two perspectives:
• The perspective of UK universities seeking to internationalise;
• The perspective of universities in other countries wishing to develop their leadership capacity and capability to operate internationally.

We aim to undertake internationalisation activities in a way that delivers mutual benefits.

We do this through:
• Leadership development and capacity building
• Partnership, twinning and networking programmes
• Programme delivery in the UK or in other countries
• Research and exchange of good practice
• Bespoke or open-access programmes
• Workshops, conferences, seminars and international dialogues
• Consultancy and advisory services
• International modules on programmes for UK-based delegates
• Welcoming international participants on UK programmes

To date we have experience of working with more than 24 countries.

“If the university were a curry then internationalisation would not be an additional ingredient. It would be a spice; it gets everywhere and changes the flavour of everything, often in unpredictable ways.”

Professor, Jawaharlal Nehru University, India
